

Date: 2/28/20

Team present: Alex, Jess, Andrea

Agenda / Issues

- Check in on the hosting functionality to see if the MVP is at a level that Richard wants
- We need to simulate transaction management but not actually implement it, what do you want this to look like?
- Show Richard what we currently have
- Specifically what kind of docker containers do you want to see? Can you go more in depth?
- What are some of the next steps that we should take?

Follow-up Actions

- Continue to improve the functionality regarding transactions
- Work on letting users view their profile on the side
- Style the webpage to look cleaner

Discussion / Feedback

- Work on the core functionality instead of trying to obtain all the features
- Try to get the process of ordering something to work
- Allow a user to view their profile
- Login -> find out what you want to eat -> order food -> checkout process
- Do NOT build transaction management
- Over the next couple weeks, style the web application and make it look cleaner

Discussion / Feedback (Continued)
